

Instructions for the Excel Graph Paper, GraphPaper.xls

Select the appropriate size grid from the tabs at the bottom of the page, small, medium or large.

Make sure the Drawing Tool Bar is turned on. Usually at the bottom of the page.

If it is not turned on, right click on the Menu Bar and select Drawing.

Use the **Auto Shape** or **Line** tools to draw your graph.

Put your name and the problem number at the top of the page.

I recommend "Printing to pdf", which can be done if you have software for creating pdf's. If you do not have it, there are free ones on the internet. I use PrimoPDF.

You can also select your work, copy and paste it into a graphics program, such as Paint (a free accessory on most computers - PC or MAC). Then save it as a jpg. This you can post to a Discussion Topic using the **HTML Creator** and the **insert image button**.
